

## BENEFITS AT A GLANCE

- Provides additional functionality to Sapphire for improved site operational efficiencies
- Allows electronic viewing of your “paper journal” receipts for an instant snapshot of all your store’s transaction data
- Provides tools for fast and easy configuration of Sapphire, Ruby, and/or Topaz remotely or at the site
- Add, delete, view, save, and print utilities for standard and custom reports and easy data analysis
- Quickly locates, views, searches and filters all of your sales transaction data using the Transaction Manager

## Decision Management Software for Maximum Operational Efficiency

VeriFone's Sapphire Management Suite (SMS) is a set of software tools that provides additional functionality to Sapphire users for improved operational efficiencies. SMS includes 4 separate modules to help boost your business performance. Included in the suite of modules is the Journal Browser, Configuration Manager, Transaction Manager and Report Navigator. The Sapphire site server provides you with all of your site's raw data—SMS helps you quickly and easily view and utilize this data for greater store productivity and increased sales.

SMS was designed for sites that want detailed information on what their store is selling, how and when purchases are being made, what time of day sales are coming in, what their cashiers are voiding, and more. This application provides you the competitive advantage of using the latest technology for real-time data access in order to better understand your business, reduce expenses, increase revenue, and maximize profits.

SMS allows you to quickly run sales reports on peripherals such as car wash and fast food, create custom promotions to

increase sales for slow periods, and utilize itemized store sales data to streamline your inventory. In addition, it will help maximize your ordering process, speed shift transactions with automated reporting mechanisms, free up valuable workstation time by printing reports on the back office printer, and so much more.

# SMS

Card Type Product Report				Store Number: 1045

SMS offers a complete library of standard reports including the Card Type Product Report which shows what types of cards your customers are using.

## Features & Benefits

### Journal Browser

- A fast and efficient way to view "paper" journal receipts electronically
- Without having to sort through endless journal tape, it is a great tool to quickly search, view, and print sales transactions
- A complete record of all store transaction data for a specific period of time is easily viewed directly from an Internet browser
- After downloading the data for a specific time period, the easy-to-use browser interface guides in selecting different sets of criteria, such as transaction type, in order to locate specific information
- Search tool highlights one-by-one all of the transactions that match selected criteria, or can filter the data which will open a new window to display only the transactions that meet the selected search conditions

### Configuration Manager

- Provides users a fast and easy way to configure the Sapphire site controller, Ruby SuperSystem, and/or Topaz at the site or remotely

- All site attributes related to security, sales, fuel, maintenance, and networking can be set up by simply selecting specific parameters and/or entering information. It includes:
  - Manager—an interface for defining operational parameters including: method of payment, tax rates, merchandise, restrictions, identification checks, PLU promotions, fuel panel, security controls, and more.
  - Fuel Management—an interface to set up all functions and parameters for fuel management, including pump operating procedures, pump attributes, fuel prices, DCR parameters, discounts and more.
  - Device Management—easy management of site peripheral devices.
  - Maintenance—easy set up of all maintenance operations including registration and version and file information, site IP statistics and more.

- Network Management—define network configuration functions for sales and communications including network parameters for processing credit cards, batch closes, debit cash back and encryption method, and more.

### Transaction Manager

- Offers tools for locating and viewing your site transactions
- Provides extensive search and filtering operations for locating and viewing specific transaction information
- Tools to quickly archive both new and all transactions to a local computer

### Report Navigator

- Allows you to add, delete, view, save, and print all Sapphire standard and custom reports
- Create a report group by assigning two or more reports to that group
- Using report groups, easily view, save, and print several reports at the same time
